TIME AND SPACE MANAGEMENT

With more and more traffic and distracted drivers on the roadway, getting from point A to point B can challenge the most seasoned driver.

By establishing and maintaining time and space management this will allow a safety cushion around the vehicle.

- ✓ Maintain a 360* circle of awareness around the vehicle, keeping the 6 sides of the vehicle clear of other objects.
- ✓ Stay out of the cluster- Practice driving alone, big space cushion up front, slow down when vehicles are on the side of the vehicle and slow down to encourage tailgaters to go around the vehicle.
- ✓ Ensure the equipment is in good working order and that communicating intent is clear by eye contact, signals, brake lights, headlights, backup alarms, horns, and strobes.

Time and Space management is key to maintaining a safe and relaxed commute.
