

BEST PRACTICES – DEAD BATTERY STORAGE

Lithium batteries are dangerous and deadly if not disposed of properly.

To store dead lithium batteries, store them in a non-metal container in a cool, dry place until you can properly dispose of them.

Never put loose batteries in a drawer or area where they may come into contact with common metal items such as paper clips or staples.

Battery terminals (ends) rubbing against one another can cause a spark, and it is recommended to either:

- Tape the terminals of used batteries with electrical tape;
- OR place each battery in separate plastic bags.

Use The Following Resources For Proper Disposal Of Lithium Batteries:

- call2recycle.org
- search.earth911.com
- Contact your local government or hardware store(s)
